IOWA HOME HEALTH
DIAGNOSIS CODE SELECTION

Home Health services must include a diagnosis code selection prior to billing. If a diagnosis code is not selected, an **alert** will trigger preventing the visit from being exported.

R7052 - Diagnosis Code is missing. ❗

To select a diagnosis code, navigate to the '**Authorizations**' page in the Carebridge portal. Here, the 'Filters' drop-down menu can be used to locate the desired authorization. Click the '**Actions**' icon (*three vertical dots*) to the right of the authorization row and select '**Authorization Details**'.

On the **authorization details pop up screen**, click the **pencil icon** to enable editing. Select a diagnosis code from the drop-down list and click **save** at the bottom right of the screen.

The diagnosis code for visits with **no authorization** can be set or changed on the **'Visit Details'** page. Click the pencil icon under the billing card to enable editing. Select the primary diagnosis code and other diagnosis codes if needed, then click save.

A pop-up window will prompt a final confirmation for this visit and provide users the option to apply the current diagnosis code(s) for *any visits with this same service code and member that do not have a diagnosis code set.* This feature allows users to apply diagnosis codes on multiple visits with no authorization for the same member and service automatically.
