

Authorization Issuance Types

Procedure codes are categorized as always, sometimes, or never requiring a prior authorization for a service to be performed. This document outlines the criteria for prior authorizations and which codes may require them.

1	ALWAYS	These services will always require an authorization to be present in the CareBridge system for EVV visits to be captured.
2	SOMETIMES	These services will only require an authorization to be present in the CareBridge system some of the time for EVV visits to be captured.
3	NEVER	These services will never require an authorization to be present in the CareBridge system for EVV visits to be captured.

IMPORTANT: If a Provider has been issued an authorization and **does not** see the authorization in the CareBridge system, providers should reach out to their health plan point of contact.

Always

When a service is listed as “Always” as the Auth Issuance Type, the Health Plan requires that a valid authorization be present in the CareBridge system before an EVV visit can be captured.

CareBridge User

- *Visits for these services **must be** associated to the authorization received by CareBridge from the Health Plan.*
 - *If services need to be rendered prior to the authorization being available in the CareBridge system, a manual entry may be necessary after the visit took place.*

Third-Party EVV User

- EVV visit data sent to CareBridge for these services **must include** the correct authorization number in the 'AuthRefNumber' field.
 - This authorization number **must match** to an authorization received by CareBridge from the Health Plan
 - If the authorization number does not match what the Health Plan sent to CareBridge, an alert will be returned to the Provider / Third-Party EVV vendor in the CareBridge response file.

Sometimes

When a service is listed as "Sometimes" as the Auth Issuance Type, the Health Plan requires that a valid authorization be present in the CareBridge system in some situations before an EVV visit can be captured.

CareBridge User

An authorization for the service **is sent** to CareBridge by the Health Plan:

- Visits for these services **must be** associated to the authorization received by CareBridge from the Health Plan.
 - This authorization number **must match** an authorization received by CareBridge from the Health Plan.
 - If the 'AuthRefNumber' field is blank, CareBridge will attempt to match to an authorization using other provided data elements.

An authorization for the service **is not sent** to CareBridge by the Health Plan:

- Providers must follow the "No Authorization Workflow" as covered in the following training materials:
 - Micro Learning: [CareBridge Provider Portal - No Authorizations](#)
 - Reference Document: [No Authorization Workflow](#)

Third-Party EVV User

An authorization for the service **is sent** to CareBridge by the Health Plan:

- EVV visit data sent to CareBridge for these services **must include** the **correct** authorization number in the 'AuthRefNumber' field.
 - This authorization number **must match** to an authorization received by CareBridge from the Health Plan.
 - If the 'AuthRefNumber' field is blank, CareBridge will attempt to match to an authorization using other provided data elements.
 - i. If a match **is found**, the visit will be associated to this authorization number.
 - ii. If a match **is not found** the visit will be treated as if an authorization was not sent to CareBridge by the Health Plan.

An authorization for the service **is not sent** to CareBridge by the Health Plan:

- EVV visit data sent to CareBridge for these services **must be sent** with the 'AuthRefNumber' field **blank** (null).
 - If the 'AuthRefNumber' field is sent to CareBridge with a value, an alert will be returned to the Provider / Third-Party EVV vendor in the CareBridge response file.

Never

When a service is listed as “Never” as the Auth Issuance Type, the Health Plan does not require an authorization be present in the CareBridge system for EVV visit to be captured.

CareBridge User

- Providers must follow the “**No Authorization Workflow**” as covered in the following training materials:
 - Micro Learning: [CareBridge Provider Portal - No Authorizations](#)
 - Reference Document: [No Authorization Workflow](#)

Third-Party EVV User

- EVV visit data sent to CareBridge for these services **must be sent** with the 'AuthRefNumber' field **blank** (null).
 - If the 'AuthRefNumber' field is sent to CareBridge with **any** value, an alert will be returned to the Provider / Third-Party EVV vendor in the CareBridge response file.

Authorization category assignments are captured below.

Personal Care Services are not listed as these services are "Always" authorized.
