Arkansas
Third-Party EVV Vendor
Integration Testing Process Guide

TABLE OF CONTENTS

INTRODUCTION TO CAREBRIDGE INTEGRATION

OVERVIEW

The purpose of this document is to assist Third Party EVV Vendors in becoming acclimated with and successfully submitting data to CareBridge for purposes of claim generation. In order for a vendor to begin sending production data, they must successfully complete the required tests cases. Once a test case is submitted, a response file should be generated between thirty minutes and one hour indicating all file or data level errors. This document is intended for Technical teams within Third Party EVV Vendors who will be implementing the file exchange process.

BEFORE YOU GET STARTED

In order to initiate the testing process, you will need to complete the following steps:

1. Complete the Third-Party EVV Vendor Intake Form:
   http://evvintegrationeform.carebridgehealth.com
2. Review the CareBridge EVV Integration Guide and Technical Specifications for Arkansas:
   http://evvintegration.carebridgehealth.com/
3. Send a public key in OpenSSH format (follow instructions below)
   Public SSH Key Generation Process
    i. Open Command Prompt in Windows or terminal for Mac/Linux
    ii. Type (or copy) the following:

   ```
   ssh-keygen -t rsa -b 4096
   ```

    iii. Enter a file name (e.g. public-ssh-key-[organization name])
    iv. (Optional) Enter a password
    v. (Optional) Re-enter password
    vi. Go to the file location where the key was saved and copy the public key. (This will generally be a .pub) file. Send the public key via email to evvintegration@carebridgehealth.com.
          DO NOT send the private key.

4. Receive SFTP credentials and connectivity instructions when the mailbox has been configured. This usually occurs within 5 business days.

Note: if you have previously completed the integration process in another state, you will not need to re-send a public key or receive new credentials, but you will still need to complete the vendor intake form and successfully complete test cases below (see Appendix B).

 V3.0_FEB25

GENERAL TESTING INFORMATION

- CareBridge will provide you test data to use for test cases. If you have credentials, but have not received test data, please reach out to evvintegration@carebridgehealth.com to request test data.
- Unless specified in the specific test case, it is not required to use the same member, provider, and authorization information for all test cases, however it is recommended.
- Vendors should complete the Integration Testing Checklist throughout the course of testing.
  - Checklist can be found in Appendix A. It is also available for download in Excel/PDF at
    Arkansas: Third-Party EVV Vendor Integration Testing Process Guide
- Once testing has been completed, please email the completed testing checklist (in Appendix A) to CareBridge for validation.

    evvintegration@carebridgehealth.com
- Once CareBridge has reviewed testing results/checklist and has determined that the requirements of the Technical Specifications have been met CareBridge will enable the vendor and associated agencies to submit EVV visit data to the production environment.
- **Note:** specific times provided in test case are given in **Local** time; however, as stated in the technical specification, DateTimes in the inbound data files must be converted to **UTC**. The time difference will be 5-6 hours depending on daylight savings time.
- **For vendors that have previously completed this testing guide in another state, see Appendix B Alternative Testing Process.**

TEST CASE 1 – CONNECTION TESTING (DEV)

Purpose
- To ensure the vendor has the ability to upload files to the dev SFTP site

Test Prerequisites
Vendor credentials provided for the dev SFTP site

Test Data Requirements
None

Action Taken
1. Vendor connects to dev SFTP site
2. Vendor uploads a file including headers only to the dev SFTP site

Expected Outcome
A response file containing headers only is uploaded to the /output folder of dev SFTP site

> *Note: This should occur generally within 1 hour of uploading the file.*
> *Reach out to CareBridge if time delay greater than 3 hours.*

V3.0_FEB25

TEST CASE 2 – CONNECTION TESTING (PRODUCTION)

Purpose
- To ensure the vendor has the ability to upload files to the prd SFTP site

Test Prerequisites
Vendor credentials provided for prd SFTP sites

Test Data Requirements
None

Action Taken
1. Vendor connects to prd SFTP site
2. Vendor uploads a file including headers only to the prd SFTP site

Expected Outcome
A response file containing headers only is uploaded to the /output folder of prd SFTP site.

Note: This should occur generally within 1 hour of uploading the file. Reach out to CareBridge if time delay greater than 3 hours.

TEST CASE 3 – SCHEDULED APPOINTMENT

Purpose

CareSource and Summit have requested that appointments be sent prior to scheduled visits. If a vendor is able to do so, they must complete this test case. If a vendor cannot send appointments prior to visits, this test case can be omitted.

Test Prerequisites

- Test 1 Complete

Test Data Requirements

- ApptStartDateTime must be 9:00 am local time on December 13, 2024.
- ApptEndDateTime must be 11:00 am local time on December 13, 2024.
- All required fields indicated in the Scheduled Appointment column of the Appointments / Visits Data File Format table must be included.

Action Taken

1. Upload a file with a scheduled appointment to the dev SFTP site
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. Correct and re-submit file(s) using the same ApptID until all prebilling validation errors are resolved.

Expected Outcome

Vendor receives a response file with no prebilling validation errors corresponding to the ApptID used for the scheduled appointment.

(If response file includes VCR2012, VCR2013, or VCR2023 errors, see note in the section for Test Case 4).

TEST CASE 4A AND 4B – SUBMIT COMPLETED VISIT (EVV, IVR)

Purpose

To ensure that vendors can successfully send completed visits with at least one of the two compliant methods. If the vendor intends to send data using multiple methods, they must complete a test case for each method. Note: if not using all CheckInMethod/CheckOutMethods, you do not need to complete both test cases below.

Test Prerequisites

- Test 1 Complete

Test Data Requirements

<u>4a</u>

- If Test Case 3 was completed, vendor must use the same ApptID as was used in Test Case 3 (for the first CheckInMethod sent).
- ApptStartDateTime must be 9:00 am local time on December 13, 2024.
- ApptEndDateTime must be 11:00 am local time on December 13, 2024.
- CheckInDateTime must be 9:00 am local time on December 13, 2024.
- CheckOutDateTime must be 11:00 am local time on December 13, 2024.
- If vendor system is unable to submit visits in the past for E or I visit types, vendor may use the date that the visit is submitted to CareBridge as the check-in date, but they still must ensure that CheckInDateTime is 9:00 am local time and CheckOutDateTime is 11:00 am local time.
- CheckinMethod should be E or I.
- CheckOutMethod must match CheckInMethod.
- ClaimAction must be null
- All required fields indicated in the Completed Visit column of the Appointments / Visits Data File Format table must be included.

<u>4b</u>

- ApptID must be different from Test Case 4a
- ApptStartDateTime must be 9:00 am local time on December 14, 2024.
- ApptEndDateTime must be 11:00 am local time on December 14, 2024.
- CheckInDateTime must be 9:00 am local time on December 14, 2024.
- CheckOutDateTime must be 11:00 am local time on December 14, 2024.
- CheckinMethod should be E or I but different from the method used in 4a.
- If vendor system is unable to submit visits in the past for E or I visit types, vendor may do one of the following:
  - Use the date that the visit is submitted to CareBridge as the check-in date and submit test 4b on a different day than test 4a or
  - Use the date that the visit is submitted to CareBridge as the check-in date and submit the visit for a different member/authorization than test 4a (to avoid potential overlapping visits)
    - In either case they should ensure the CheckInDateTime is 9:00 am local time and CheckOutDateTime is 11:00 am local time.

Confidential & Proprietary
V3.0_FEB25

- CheckOutMethod must match CheckInMethod.
- ClaimAction must be null
- All required fields indicated in the Completed Visit column of the Appointments / Visits Data File Format table must be included.

Action Taken

1. Submit a completed visit for each compliant CheckInMethod/CheckOutMethod you intend to use in production (E, I, F)
   a. The CheckInMethod/CheckOutMethod for the two test sub-cases can be completed in any order.
   b. One file can be used to complete all three sub-tests.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. Correct and re-send ApptID until all prebilling validation errors are resolved.

Expected Outcome (Vendor)

Vendor receives a response file with no prebilling validation errors corresponding to the ApptID used for each test case.

There are a few common errors that may occur both during the testing process and once data is sent in production. Please see the guidance below for correcting these errors:

Error Code	Long Description	Matching Criteria	Solution
VCR2023	Provider is not associated to the visit	1. ProviderEIN field matches a Tax ID we have received from the PASSE 2. ProviderNPI or ProviderAtypicalID field matches an NPI/API we have received from the PASSE	1. Confirm the Tax ID and NPI or API have been correctly input into the appropriate fields. 2. If using production data, Providers can also utilize the CareBridge Provider Portal to view the data that has been received from the PASSE and ensure accuracy.
VCR2013	Member is not associated to the visit	1. Provider matches 2. MemberMedicaidID matches the Medicaid ID received by the PASSE	1. Confirm the member Medicaid ID was input into the MemberMedicaidID field. This should be the actual medicaid ID rather than the PASSE member ID. 2. If using production data, Providers can also utilize the CareBridge Provider Portal to view the data that has been received from the PASSE and ensure accuracy.
VCR2012	Visit is not associated to an authorization	1. Provider Matches 2. Member Matches 3. AuthRefNumber matches authorization number received from the PASSE 4. ServiceCode matches the authorization received from the PASSE 5. Modifier 1 and Modifier 2 match authorization received from the PASSE (if applicable)	1. Confirm that the appointment does not have an unresolved VCR2013 or VCR2023 error. 2. Confirm AuthRefNumber, ServiceCode, Modifier 1, and Modifier 2 values have been correctly input into the appropriate fields. 3. If using production data, Providers can also utilize the CareBridge Provider Portal to view the data that has been received from the PASSE and ensure accuracy.

If the steps above have been attempted without success, please reach out the CareBridge integration team for additional assistance.

Confidential & Proprietary   V3.0_FEB25

TEST CASE 5 – UPDATE COMPLETED VISIT TO MANUALLY COMPLETED VISIT

Purpose

To ensure that vendors can successfully:

- Update a previously sent visit (Test Case 5).
- Send a manually completed visit (Test Case 5).

Test Prerequisites

- Test 4 completed

Test Data Requirements

- Vendor must use the same ApptID as was used in test 4a.
- ApptStartDateTime must be 9:00 am local time on December 13, 2024.
- ApptEndDateTime must be 11:00 am local time on December 13, 2024.
- CheckInDateTime must be 9:05 am local time on December 13, 2024.
- CheckOutDateTime must be 11:30 am local time on December 13, 2024.
- CheckinMethod must be M.
- CheckOutMethod must be M.
- ManualReason must contain a valid Manual Reason Code.
- All required fields indicated in the Completed Visit column of the Appointments / Visits Data File Format table must be included.

Action Taken

1. Submit a completed visit using a previously used ApptID that has a manual check in method and a checkin time that would be considered late.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. Correct and re-send ApptID until all prebilling validation errors are resolved.

Expected Outcome

Vendor receives a response file with no prebilling validation errors corresponding to the ApptID (warnings are allowable).

Confidential & Proprietary

V3.0_FEB25

TEST CASE 6 – SUBMIT LATE COMPLETED VISIT - OPTIONAL

Purpose
To ensure that vendors can successfully:

- Indicate a late reason if a visit occurs outside of the allowable time frame

Note: If a visit is initially submitted with CheckinMethod/CheckoutMethod E or I as a late visit, and is subsequently updated via manual entry to be within the allowable timeframe, it would still be considered a late visit.

Test Prerequisites
- Test 4 completed

Test Data Requirements
- ApptID must not match any previously sent ApptIDs.
- ApptStartDateTime must be 9:00 am local time on December 15, 2024.
- ApptEndDateTime must be 11:00 am local time on December 15, 2024.
- CheckInDateTime must be 9:15 am local time on December 15, 2024.
- CheckOutDateTime must be 11:15 am local time on December 15, 2024.
- CheckinMethod must be E or I.
- CheckOutMethod must be E or I.
- If completing Test Case 6, LateReason and LateAction must contain valid Late Reason and Late Action Codes; however, visits missing these codes will generate warnings in response files that would not block claim generation, and therefore Test Case 6 is optional.
- All required fields indicated in the Completed Visit column of the Appointments / Visits Data File Format table must be included.

Action Taken
1. Submit a completed visit using a previously used ApptID that has a manual check in method and a check in time that would be considered late.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. Correct and re-send ApptID until all prebilling validation errors are resolved.

Expected Outcome
Vendor receives a response file with no prebilling validation errors corresponding to the ApptID (warnings are allowable).

TEST CASE 7 – SUBMIT MISSED COMPLETED VISIT (OPTIONAL)

Purpose

To ensure that vendors can successfully send:

- A missed completed visit.
- Indicate a missed reason/action if a visit occurs outside of the allowable time frame.
  If vendor system does not allow for missed visits to occur, this test can be omitted.

A missed visit can occur even if that visit has been completed, if the CheckInDateTime is greater than three hours after the ApptStartDateTime.

Test Prerequisites

- Test 1 Complete

Test Data Requirements

- ApptID must not match any previously sent ApptIDs.
- ApptStartDateTime must be 9:00 am local time on December 21, 2024.
- ApptEndDateTime must be 11:00 am local time on December 21, 2024.
- CheckInDateTime must be 1:00 pm local time on December 21, 2024.
- CheckOutDateTime must be 3:00 pm local time on December 21, 2024.
- ClaimAction must be null.
- MissedReason and MissedAction must contain valid Missed Reason and Missed Action Codes as defined in our technical specifications.

Action Taken

1. Submit a completed visit with a new ApptID with a visit start time that would be considered missed.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. Correct and re-send ApptID until all prebilling validation errors are resolved.

Expected Outcome

Vendor receives a response file with no prebilling validation errors corresponding to the ApptID sent
The following day, Vendor should see that visit in the Appointment Status Report with a status of "missed_completed".

                      V3.0_FEB25

CAREBRIDGE

TEST CASE 8 – SUBMIT EARLY VISIT (OPTIONAL)

Purpose

To ensure that vendors can successfully send:

- An early completed visit
- Indicate an early reason/action if a visit occurs outside of the allowable time frame.
  If vendor system does not allow for early visits to occur, this test can be omitted.

Test Prerequisites

- Test 1 Complete

Test Data Requirements

- ApptID must not match any previously sent ApptIDs.
- ApptStartDateTime must be 9:00 am local time on December 22, 2024.
- ApptEndDateTime must be 11:00 am local time on December 22, 2024.
- CheckInDateTime must be 7:00 am local time on December 22, 2024.
- CheckOutDateTime must be 9:00 am local time on December 22, 2024.
- ClaimAction must be null.
- EarlyReason and EarlyAction must contain valid Early Reason and Early Action Codes as defined in our technical specifications.

Action Taken

1. Submit a completed visit with a new ApptID with a visit start time that would be considered early.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. Correct and re-send ApptID until all prebilling validation errors are resolved.

Expected Outcome

Vendor receives a response file with no prebilling validation errors corresponding to the ApptID sent.

         V3.0_FEB25

TEST CASE 9 – CANCEL A VISIT

Purpose

To ensure that vendors can successfully:

- Cancel a visit.

  For all intents and purposes, cancelling a visit serves the function of deleting that visit.

Test Prerequisites

- Test Case 7 Complete (if Test Case 7 was omitted, vendor should send a visit utilizing all of the test data requirements except the CheckInDateTime and CheckOutDateTime can match the ApptStartDateTime and ApptEndDateTime prior to completing Test Case 9)

Test Data Requirements

- The visit data and ApptID must match Test Case 7, but must also include the following:
  - ApptCancelled must be "C".

Action Taken

1. Update a previously sent ApptID to cancel that appointment.

Expected Outcome

- Vendor receives a response file with no prebilling validation errors corresponding to the ApptID sent.
- The following day, Vendor should see that ApptID in the Appointment Status Report with a status of "cancelled".

TEST CASE 10 – OVERLAPPING VISITS

Purpose
CareSource and Summit do not allow multiple caregivers to provide service for the same member under the same authorization at the same time. This test case will serve the following purposes:
- Ensure the vendor understands what causes overlapping visits.

Test Prerequisites
- Test 1 Complete.

Test Data Requirements
Two ApptIDs are necessary for this test case:

ApptID 1
- ApptStartDateTime must be 9:00 am local time on December 24, 2024.
- ApptEndDateTime must be 11:00 am local time on December 24, 2024.
- CheckInDateTime must be 9:00 am local time on December 24, 2024.
- CheckOutDateTime must be 11:07 am local time on December 24, 2024.
- ApptID must not match any previously sent ApptIDs.
- CheckinMethod and CheckOutMethod must be E, I, or M.
- ClaimAction should be null.

ApptID 2
- ApptStartDateTime must be 11:00 am local time on December 24, 2024.
- ApptEndDateTime must be 1:00 pm local time on December 24, 2024.
- CheckInDateTime must be 10:55 am local time on December 24, 2024.
- CheckOutDateTime must be 1:00 pm local time on December 24, 2024.
- CheckinMethod and CheckOutMethod must be E, I, or M.
- ApptID must not match any previously sent ApptIDs including ApptID 1 above.
- The member, provider, and authorization information must match ApptID 1.
- ClaimAction should be null.

Action Taken
1. Submit two completed visits with overlapping timeframes.
2. Retrieve response file from output folder and confirm that there is a VCR2025 error present.

Expected Outcome
- Vendor receives a response file with a VCR2025 alert

TEST CASE 11 – SUBMIT A CLAIM

Purpose

837 files for CareSource and Summit members must be generated via CareBridge. CareBridge will use EVV visit Check-In/Check-Out data to generate claims and pass them to Availity. This test case will serve the following purposes:

- Ensure that the vendor is able to successfully generate a claim via CareBridge.
- Ensure that the vendor understands where they can view claimed amount, claim status, and claim numbers to surface that information to providers.

Once in production, it is recommended that visits are submitted without the ClaimAction field initially so that errors are resolved and then re-submitted with ClaimAction N to create claims.

Claims in Arkansas are submitted by CareBridge on a daily basis.

Test Prerequisites

- Test Case 5/6 Complete.

Test Data Requirements

- The visit data and ApptID from Test Case 5/6 can be used to complete this test case, but must also include the following:
    - ClaimAction must be "N" (New).
    - Rate must be included
- Alternatively, a new ApptID can be used to complete this test case. If using a new ApptID it should meet the following criteria:
    - ApptID must not match any previously used ApptID.
    - The member and authorization information should be distinct from previously sent test cases.
    - ApptStartDateTime must be 9:00 am local time on December 13, 2024.
    - ApptEndDateTime must be 11:00 am local time on December 13, 2024.
    - CheckInDateTime must be 9:05 am local time on December 13, 2024.
    - CheckOutDateTime must be 11:30 am local time on December 13, 2024.
    - CheckinMethod must be E, I, or M.
    - CheckOutMethod must be E, I, or M.
    - If CheckinMethod M, ManualReason must contain a valid Manual Reason Code.
    - ClaimAction should be "N"
    - Rate must be included.
    - All required fields indicated in the Completed Visit column of the Appointments / Visits Data File Format table must be included.

Action Taken

1. Send a visit with ClaimAction "N" to generate a claim.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. (If needed) Correct and re-send ApptID until all prebilling validation errors are resolved.
4. The following day, vendor should review the Appointment Status Report for that ApptID.

Confidential & Proprietary V3.0_FEB25

Expected Outcome

- Vendor receives a response file with no prebilling validation errors corresponding to the ApptID sent.
- The following day, Vendor should see that visit in the Appointment Status Report with the following information:
  - HasErrors should be false.
  - BilledUnits should equal the visit duration in minutes divided by the units for the ServiceCode/Modifiers listed in the Integration Specification (8 units).
  - BilledAmount should equal the Rate (as provided in the visit file by the vendor) times the billed units.
- Vendor should confirm that the billed amount aligns with what they expected to be billed for that visit. If it does not, vendor should ensure that they are sending the unit rate in the Rate field, instead of the hourly rate.
- Vendor should confirm that they understand the other claim related fields in the Appointment Status Report (fields 51-64).

TEST CASE 12 – CORRECT A CLAIM

Purpose
- Ensure that the vendor is able to successfully correct a claim via CareBridge. This is necessary any time the billed amount or billed units changes for a claim.

Test Prerequisites
- Test Case 11 Complete
- The claim generated in Test Case 11 must be in a terminal status (paid or denied) – this can be determined using the Appointment Status Report. If a vendor attempts to submit a corrected claim prior to the initial claim reaching a terminal status, that visit will generate a prebilling_rejection.
- Vendor will need to wait one day between completing Test Case 11 and Test Case 12

Test Data Requirements
- The visit data and ApptID must match Test Case 11 except for the following:
    - CheckOutDateTime must be 1:30 pm local time on December 13, 2024.
    - If testing using Home Health Services codes for Testing, the Rate field must be submitted with a new value.
    - CheckInMethod and CheckOutMethod must be M
    - ManualReason must contain a valid Manual Reason Code.

Action Taken
1. Update a previously sent visit with a new CheckOutDateTime to generate a corrected claim.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. (If needed) Correct and re-send ApptID until all prebilling validation errors are resolved.
4. The following day, vendor should review the Appointment Status Report for that ApptID.

Expected Outcome
- Vendor receives a response file with no prebilling validation errors corresponding to the ApptID sent.
- The following day, Vendor should see that visit in the Appointment Status Report with the following information:
    - HasErrors should be false.
    - BilledUnits should equal the visit duration in minutes divided by the units for the ServiceCode/Modifiers listed in the Integration Specification.
    - BilledAmount should equal the Rate (as provided in the visit file by the vendor) times the billed units.
- Vendor should confirm that the billed amount aligns with what they expected to be billed for that visit. If it does not, vendor should ensure that they are sending the unit rate in the Rate field, instead of the hourly rate.
- Vendor should confirm that they understand the other claim related fields in the appointment status report (fields 51-64).

CAREBRIDGE

TEST CASE 13 – VOID A CLAIM

Purpose
- Ensure that the vendor is able to successfully void a claim via CareBridge.

Test Prerequisites
- Test Case 12 Complete
- The claim generated in Test Case 12 must be in a terminal status (paid or denied) – this can be determined using the Appointment Status Report. If a vendor attempts to submit a voided claim prior to the initial claim reaching a terminal status, that visit will generate a prebilling_rejection.
- Vendor will need to wait one day between completing Test Case 12 and Test Case 13

Test Data Requirements
- The visit data and ApptID must match Test Case 12 except for the following:
    - ClaimAction must be "V".

Action Taken
1. Update a previously sent visit to void the claim corresponding to that visit.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. (If needed) correct and re-send visit until all prebilling validation errors are resolved.
4. The following day, vendor should review the Appointment Status Report for that ApptID.

Expected Outcome
- Vendor receives a response file with no prebilling validation errors corresponding to the ApptID sent.
- The following day, Vendor should see that visit in the Appointment Status Report with the following information:
    - Claim1_status should be voided.

TEST CASE 14 – COMPLETE A VISIT FOR A "SOMETIMES" AUTHORIZED SERVICE

Purpose

Some Home Health Procedure Codes can be completed without CareBridge receiving a prior authorization from the PASSE. In these cases, visits for these services should leave the AuthRefNumber field null. For sometimes authorized procedures, if an authorization exists, then the AuthRefNumber field should be populated.

To ensure that vendors can successfully:

- Send visit data for a service that is defined as "sometimes"authorized where there is no authorization for that member.

Test Prerequisites

- Test 4 completed

Test Data Requirements

- ApptStartDateTime must be 9:00 am local time on December 23, 2024.
- ApptEndDateTime must be 11:00 am local time on December 23, 2024.
- CheckInDateTime must be 9:00 am local time on December 23, 2024.
- CheckOutDateTime must be 11:00 am local time on December 23, 2024.
- CheckinMethod must be E, I, or M.
- CheckOutMethod must be E, I, or M.
- If CheckinMethod/CheckoutMethod is M, ManualReason must contain a valid Manual Reason Code as defined in our technical specifications.
- AuthRefNumber must be null.
- ServiceCode must correspond to a sometimes authorized ServiceCode (see CareBridge Integration Technical Specifications for additional details).
- The member utilized for this test case must be a member that does NOT have an authorization for that service code.
- ClaimAction must be null.
- All required fields indicated in the Completed Visit column of the Appointments / Visits Data File Format table must be included.

Action Taken

1. Submit a completed visit for a "sometimes" authorized procedure code.
2. Retrieve response file from output folder and confirm that there are no prebilling validation errors that need to be corrected.
3. Correct and re-send ApptID until all prebilling validation errors are resolved.

Expected Outcome

Vendor receives a response file with no prebilling validation errors corresponding to the ApptID.

APPENDIX A – TESTING CHECKLIST

ONCE TESTING IS COMPLETE

Vendors should complete the Integration Testing Checklist throughout the course of testing. Once testing has been completed, please email the completed testing checklist to CareBridge for validation evvintegration@carebridgehealth.com. CareBridge will verify that all test cases were successfully passed and provide confirmation that the vendor is able to begin submitting production data. If any test cases had to be omitted due to vendor capabilities, they should provide a rationale for why that test case cannot be complete and (if necessary) a mitigation plan for provider agencies to ensure claims will not be impacted.

V3.0_FEB25

APPENDIX B – ALTERNATIVE TESTING PROCESS

- Vendors that have previously completed the test cases outlined above in another state may request an abbreviated testing process. This request can be made via email to evvintegration@carebridgehealth.com. If approved, only the following test cases will be required:
  - Test Case 1 – Connection Testing (Dev)
  - Test Case 2 – Connection Testing (Production)
  - Test Case 11 – Submit a Claim
  - Any test cases that were previously omitted from prior testing must be completed
