

TENNESSEE PERSONAL CARE SERVICES:

FOB OVERVIEW

CareBridge supports fixed object device (FOB) visits for approved **BlueCare** and **UnitedHealthcare** caregivers without an alternative, EVV Compliant, method of checking-in and out.

A FOB may be used as an alternative method to caregivers using the CareBridge Mobile Application or IVR to check-in and check-out of visits requiring EVV. The FOB generates an 8-digit code that changes every 60 seconds. This series of numbers is called a token and corresponds to a date and time value (Figure 1).

The FOB remains at the member's address for providers to obtain a token to validate the visit. The caregiver providing the service must note the check-in and check-out tokens from the FOB during the visit and provide these to an administrator so the visit can be entered into the CareBridge Provider Portal.

Figure 1. **Fixed Object Device (FOB)**

Entering FOB Visits

Provider administrators can create FOB visits using the FOB entry function via the **Visits** page. Click the **'+Manual Entry'** button at the top right of the page and select **'FOB Visit Entry'** from the drop-down menu (Figure 2). On the FOB entry screen, fill in the necessary information about the visit including member, payer, employee, authorization, service, and location.

Figure 2. **Visits Page**

Next, enter the check-in and check-out tokens provided by the employee from the visit (Figure 3). Fill in any other additional information if needed, then click **Submit** to finalize the entry.

Figure 3. FOB Entry Screen

The screenshot shows a web form titled "Fob Entry". It contains several dropdown menus and text input fields. The fields are organized as follows:

- Row 1: Member (dropdown), Payer (dropdown), Employee (dropdown)
- Row 2: Authorization (dropdown), Service Code (dropdown), Appointment (optional) (dropdown with "Unassigned" selected)
- Row 3: Location (dropdown), Visit Duration (text input)
- Below Row 3: A small icon and text: "Locate the member's FOB and enter the token from the device to find your visit information"
- Row 4: Check In FOB Token (text input with "Token" placeholder), Check In Date/Time (dropdown)
- Row 5: Check Out FOB Token (text input with "Token" placeholder), Check Out Date/Time (dropdown)
- Row 6: Service Provider Information (dropdown)
- Row 7: Additional Appointment Information (dropdown)
- Bottom right: CANCEL and SUBMIT buttons

Please Note: If an employee fails to obtain the check-in and check-out tokens during a visit, administrators can perform a traditional manual entry in lieu of the FOB entry.

FOB Fast Facts

1. FOBs are intended to be used in cases where no alternative means of check-in and check-out are available. BlueCare and UnitedHealthcare each evaluate members for FOB eligibility. Please contact the MCO if you believe you have a member who might be eligible for a FOB.
2. The FOB is a small device approximately 2.5" x 1" and weighs .5 oz.
3. The FOB battery should last 5 years.
4. FOBs do not connect to the Internet / Wi-Fi. Instead, they are registered to a specific member address and use a rotating series of numbers, called a token, that corresponds to a date and time.
5. The FOB is **member specific**. This means if there are multiple members in the home, each member will have a FOB, and caregivers are expected to capture the token from the correct member's FOB.
6. The FOB is intended to be 'fixed' in the home. This means members are expected to secure the FOB device in their home where a caregiver can easily access it.
 - a. Note – CareBridge has supplied adhesive so that the FOB can be installed in a fixed location within the member's home.
7. The FOB must not leave the home. Each FOB is specifically tied to a specific member's address. If the member receives care outside of the home, alternative means of EVV visit capture must be used (CareBridge Mobile Application or IVR). Using the FOB outside of the member's home may be considered Fraud and could result in action against the caregiver, provider, or member.

8. The FOB is specific to CareBridge. If the provider changes EVV Vendors, the FOB will no longer work.

FOB Frequently Asked Questions

1. What if the FOB stops working? Providers should contact the MCO to request replacement.
2. What if the FOB is lost or stolen? Providers should contact the MCO to discuss the next steps. The MCO may choose to investigate the loss or theft prior to issuing a replacement.
3. What if the caregiver writes down the wrong token? The provider will receive an error message when entering the token and will need to either obtain the correct token from the caregiver or complete a manual entry.
4. What if the caregiver forgets to write down both tokens? The provider will need to complete a manual entry. Both tokens are required for an EVV compliant visit.
5. What if there are multiple FOBs in the same home and the caregiver writes down the tokens from the wrong FOB? The provider will receive an error message when entering the token and will need to either obtain the tokens from the correct FOB or complete a manual entry.
6. What if the tokens are reversed and the check-in token is entered as the check-out token, and vice versa? The provider will receive an error message indicating that the 'check out time must be after the check in time' and will need to reenter the tokens in the correct order.
